

Amazon Suggested test flows

1. Login flow
2. Registration
3. Language and translations
4. Shipping
5. Currency convertor

Language Change

Step	Action	Expected Result	Test Data
1	Navigate to "www.amazon.com"	arrive at amazon's homepage	
2	Hover over the language change dropdown located in the navbar	<p>"#nav-flyout-icp" should change its display value from none to block</p> <p>and the dropdown modal should be visible</p>	<p>for manual testing you can use 'setTimeout(() => { debugger; }, 2000);'</p> <p>to pause the page after two seconds so you can set the state you want to preserve before continuing to test in dev-tools</p>
3	click on עברית- HE to change language to hebrew	<p>a refresh should occur and the html tag should be set to lang="he-il" with dir="rtl"</p> <p>all the website should now contain hebrew translations instead of the default english text</p> <p>and display components from right to left</p>	
4	click on Today's Deals	<p>should be redirected to Today's Deals page</p> <p>site should maintain the previously selected hebrew language setting and display all text in hebrew and display components from right to left</p>	
5	search for "fitness bike" in english in the search bar located in the navbar	results should have hebrew titles even though the search is preformed in english	
6	repeat step 2		

7	click on English - EN	<p>html tag should now have attributes</p> <p>lang="en-us" and no dir="rtl"</p> <p>site should now display english text again and also change the previously Hebrew result titles to english and display components from left to right</p>	
8	click on the amazon icon located at the top left of the navbar	site should redirect back to the homepage and maintain english language settings	
Further testing can be done using official translation files. in amazon's case most of the translations are dynamic and live.
